2 Pandas Complete Roadmap

(Already included in previous sections)

3 Matplotlib Complete Roadmap

(Already included in previous sections)

4 Seaborn Complete Roadmap

1 Basic Plots

Function	Description
<code>sns.lineplot(x, y)</code>	line plot
<code>sns.scatterplot(x, y, hue='col')</code>	scatter plot with color grouping
<code>sns.barplot(x, y)</code>	vertical bar plot with aggregation
<code>sns.histplot(data, bins)</code>	histogram
<code>sns.boxplot(x='col', y='col2')</code>	box plot
<code>sns.violinplot(x='col', y='col2')</code>	violin plot
<code>sns.countplot(x='col')</code>	count plot for categorical data

2 Pairwise & Multivariate Plots

Function	Description
<code>sns.pairplot(df)</code>	scatter plots for all pairs of variables
<code>sns.heatmap(data)</code>	correlation or value heatmap

Function	Description
<code>sns.jointplot(x, y, kind='scatter')</code>	combined scatter & histogram
<code>sns.clustermap(data)</code>	hierarchical clustering heatmap

3 Customization

Function / Parameter	Description
<code>plt.title('Title')</code>	plot title (matplotlib integration)
<code>plt.xlabel('X-axis')</code>	x-axis label
<code>plt.ylabel('Y-axis')</code>	y-axis label
<code>sns.set_style('darkgrid')</code>	change plot style (darkgrid, whitegrid, ticks)
<code>sns.set_palette('pastel')</code>	set color palette
<code>plt.figure(figsize=(w,h))</code>	set figure size

💡 Example

```
import seaborn as sns
import matplotlib.pyplot as plt

# Load dataset
df = sns.load_dataset('tips')

# Line plot
sns.lineplot(x='total_bill', y='tip', data=df)
plt.title('Line Plot Example')
plt.show()

# Heatmap
corr = df.corr()
sns.heatmap(corr, annot=True, cmap='coolwarm')
plt.show()
```
